Glass Wikipedia

Although the atomic structure of glass shares characteristics of the structure in a supercooled liquid, glass tends to behave as a solid below its glass transition temperature. A supercooled liquid behaves

as a liquid, but it is below the freezing point of the material, and in some cases will crystallize almost instantly if a crystal is added as a core.

Alternative views of the structure of liquids and glasses include the interstitialcy model and the model of string-like correlated motion. Molecular dynamics computer simulations indicate these two models are closely connected. As in other amorphous solids, the atomic structure of a glass lacks any long range translational periodicity.
