Gravitational-wave astronomy. Professor John Barrow.

One of the most striking ways in which astronomy advanced and became a more spectacular subject during the 20th Century was by extending the look that it gave us at the universe from just the optical band of light into other parts of the electromagnetic spectrum, so suddenly we had the

LIGO (Laser Interferometer Gravitational-Wave Observatory)

To make this fantastic milestone possible took a global collaboration of scientists laser and suspension technology developed for our GEO600 detector was used to help make Advanced LIGO the most sophisticated gravitational wave detector ever created, says Sheila Rowan, professor of physics and astronomy at the University of Glasgow.
