Sea ice in the climate system Met Office

As well as sea ice extent, knowledge of the total volume/mass of sea ice present is important for understanding the climate system. The mass of sea ice at any particular moment is dependent on the area of ice and its thickness. Melt and growth of the ice is termed the 'ice mass balance'; negative mass balance implies a decreasing sea ice cover whilst a positive mass balance results in net growth. Long-term changes to the ice mass balance are important indicators of climate change.
