In some cases p_c may be calculated explicitly. For example, for the square lattice \mathbb{Z}^2 in two dimensions, $p_c = 1/2$ for bond percolation, a fact which was an important result in the book [Percolation Theory for Mathematicians | SpringerLink](#). Quite apart from the fact that percolation theory had its origin in an honest applied problem (see Hammersley and Welsh (1980)), it is a source of fascinating results.
